

No circularity without repair

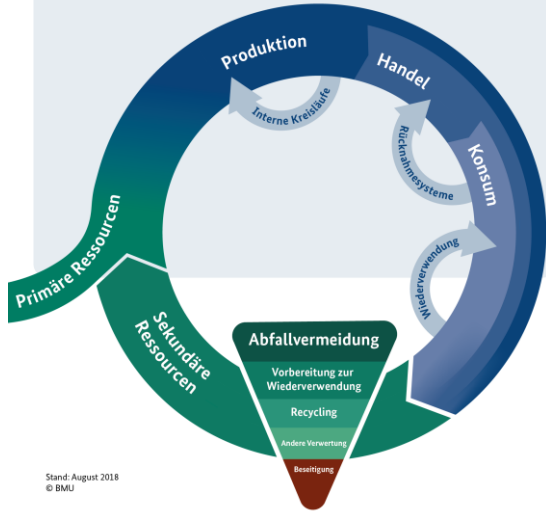

Why it is essential to create a free repair market
and a universal right to repair

Steffen Vangerow

Managing Director Vangerow GmbH

Our Mission:

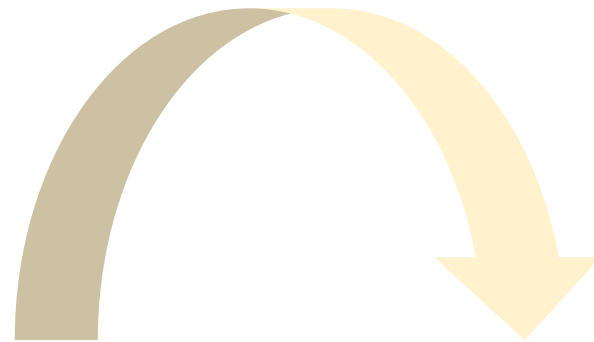

Saving the independent repair shops in Germany!

- Founded in 2015
- Different interest groups: ...
 - ⇒ Repair businesses, consumer, consumer protection, environment, science, civil society...
 - ⇒ We don't think from the manufacturer's point of view!
- Vangerow = founding member

Lobbying:

For a right to repair and the establishment of a new repair culture!

Repair

Recycling

What prevents economic repair?

1. High prices for spare parts
2. Low new device prices
3. Need to exchange a whole assembly
4. High variety of spare parts (not compatible)
5. No documentation / Software / Support
6. Training only for selected repair shops
7. Misleading eco labels
8. Warranty
9. Too few skilled workers
10. Turning away from specialist retailers (online, Discounter)

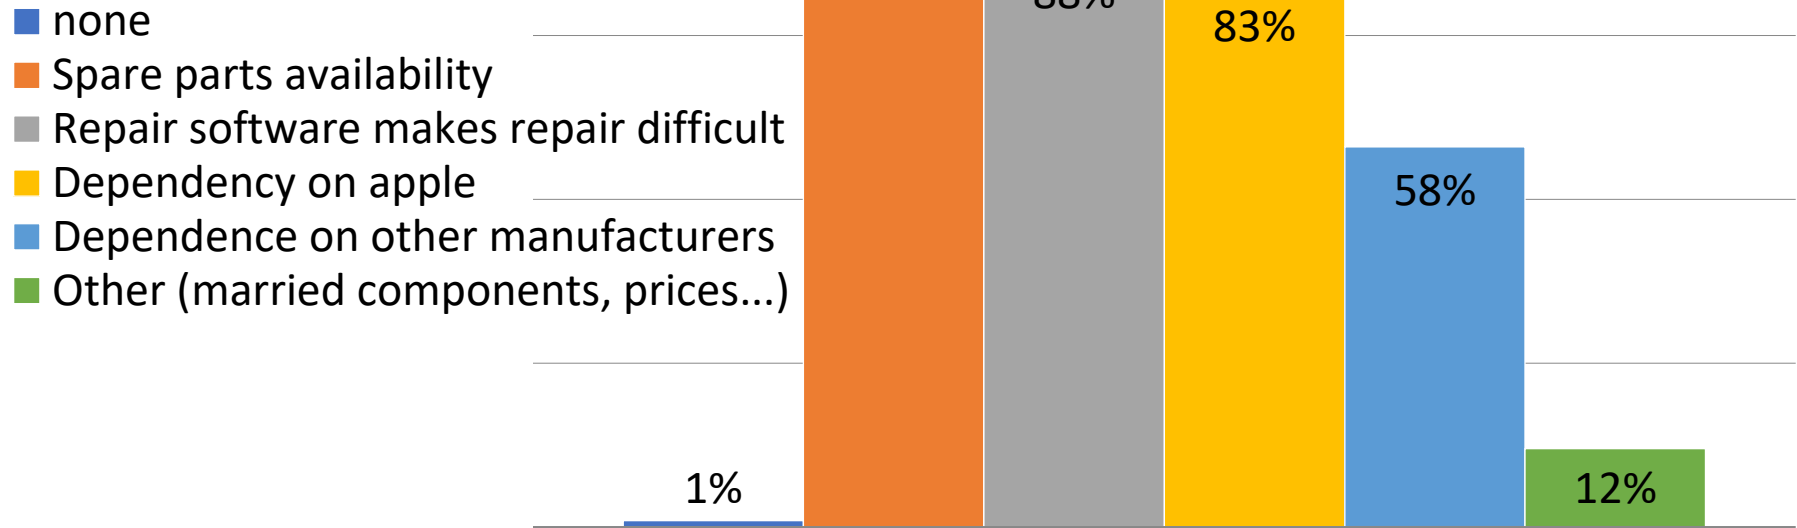

Manufacturer

Politics

Society

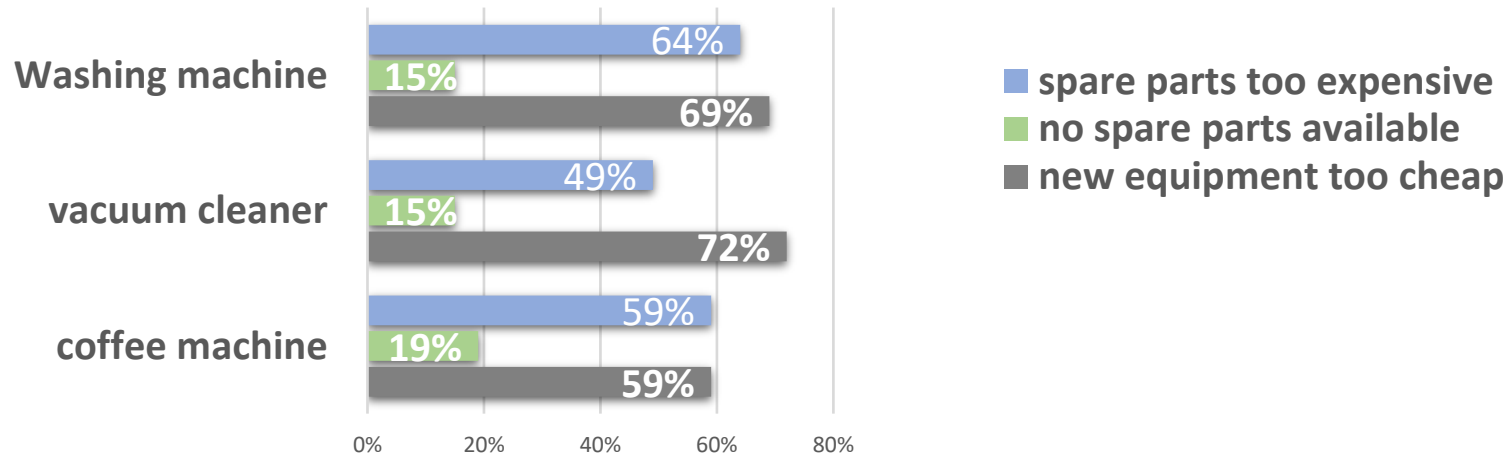

What risks do you see for the future?

(Survey of independent smartphone workshops, April - June 2022, by Vangerow)

Spare Parts

- Not available for independent repair shops
- Price disproportionately high (in relation to the price of a new device)
- Only entire assemblies available

74% of consumers have already decided against a repair, because it was too expensive compared to the new price.

Politics

Misleading eco labels

Eco-labels only take consumption into account, but not the resources for production and disposal

Warranty

=> One of the greatest dangers to repair

Society

- Lack of young technicians
- 70% of repair shops would like to repair more, if they had employees to do it
- “Meister“ required, to legally run a repair workshop (4-6 years education)

What we need, to strengthen the repair

1. Reasonable supply of spare parts
2. Access to documentation & software
3. Warranty only for spare parts
4. Repair authorization for specialists even during the guarantee-period
5. Proof of qualification for repairs as an alternative to the “Meister“ (german problem)
